EXAMINER'S ACTION

Art Unit: 2302

15. Claims 33-43 are presented for examination.

16. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

17. Applicant is reminded of the provision of MPEP. 608.02 (q) and (r) regarding a separate letter to the chief draftsman.

18. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

19. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

20. Claims 33-43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Daniel (USPN: 5,201,056).

21. Daniel et al disclose a high bandwidth processor interface for receiving and transmitting a media stream. The interface comprises a data path operable to transmit media information, a

plurality of memory controllers coupled to the data path in series to communicate stored media information to and from the data path, and a plurality of memory elements coupled to each of the plurality of memory controllers in parallel for storing and retrieving the media information. [see abstract, column 2 (line 19)-column 3 (line 23), and column 3 (line 33)-column 7 (line 38)].

22. Daniel did not explicitly give details about transmitting media information at substantially peak rate. However, it would have been obvious to one of ordinary skill in the art at the time of invention to modify Daniel's system such that the transmission of the media information is performed at substantially peak rate because it would have allowed the system to perform the data transfer operations at much higher data rate based on the system requirements, thereby increasing the overall data transfer rate of the system and hence increase the overall performance of the system.

23. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Nakagawa et al (USPN: 5,426,600).

Mason et al (USPN: 5,268,855).

Freerksen (USPN: 4,975,868).

Alsup et al (USPN: 4,893,267).

24. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alpesh M. Shah whose telephone number is (703) 305-9698. The examiner can normally be reached on Mon.-Fri. from 7:30 am to 5:00 pm.
